# Quiz cards · answer key

How a Zipper Holds Shut and Comes Apart

**Q1 · A. Bumps tuck into hollows**
Each tooth has a bump and a hollow, and the slider squeezes each bump into the next hollow.

**Q2 · B. A tiny lock holds it**
With the pull-tab flat, a tiny piece under the slider slips between two teeth and holds it still.

**Q3 · C. So both rows line up**
With the pin fully in the box, both rows start lined up and the first teeth can mesh.

**Q4 · A. Keeps the slider on**
Stops at each end keep the slider on the teeth.

**C1 · Say it your way**
elements: another name for a zipper's teeth.

**C2 · Draw it**
Look for two offset rows, with each tooth fitting between two teeth on the other side.
