A cold woods

A chickadee hides seeds in many spots in fall. It uses a brain part called the hippocampus to find them again.

Freeze and wait

A wood frog freezes, but the ice stays outside its cells. Sugar from its liver helps keep the cells safe.

Cool and slow

A chipmunk lets its body get cold to save energy. Many mammal hibernators burn brown fat to warm up.

Shiver and huddle

Bees pack into a ball. Outside bees make a blanket. Inside bees shiver their flight muscles to make heat.

Under the snow

Under the snow, mice tunnel and eat. A thick snow blanket keeps their space near freezing, not far below it.

A white coat

In snowy places, most snowshoe hares turn white in fall. Scientists think day length starts it, even if snow is late.

Make a little book

1 Fold it into 8 boxes. Open it flat.

2 Fold short end to short end. Cut the thick line. Open it.

3 Fold the long way, pictures out. Push the ends in.

4 Fold into a book. Page 1 goes on the front!
