

WONDER DAILY

Fingerprints

Make a little book

1 Fold it into 8 boxes. Open it flat.

2 Fold short end to short end. Cut the thick line. Open it.

3 Fold the long way, pictures out. Push the ends in.

4 Fold into a book. Page 1 goes on the front!

A mark on the glass

Morning light revealed a faint swirl on a glass. Under the magnifier, Little saw many curved lines instead of one plain smudge.

Ridges and grooves

A fingertip has raised friction ridges and lower grooves. The ridge tops touched the glass and left separate curved lines.

Three broad flows

Loops curve back, whorls circle a center, and arches rise across. These families describe the broad flow, not every tiny detail.

Inside the loop

Two prints were both loops, yet their small details differed. Ridges ended and split in different places across each map.

Same map, new mark

A lighter press looked smudged, but its turns, endings, and splits still lined up. Pressure changed the mark, not the ridge map.

A print on paper

Washable ink coated the raised ridge tops. They made dark paths on paper while the lower grooves left pale spaces.
