Six math clues · answer key

Soap Bubbles

Math answers (story numbers):

Math 1 · 45

28 + 17 = 45. Combine the bubbles from both blows.

Math 2 · 35

64 − 29 = 35. Subtract the dips that were used.

Math 3 · 84

36 + 48 = 84. Add the stripe sketches together.

Math 4 · 44

81 − 37 = 44. Take away the bubbles that popped.

Math 5 · 75

19 + 56 = 75. Combine both groups of timed bubbles.

Math 6 · 52

90 − 38 = 52. Subtract the turns already used.

Six one-step story problems tied to bubbles. Grade 2 number work; reading stays richer.

Reading & writing · answer key

Soap Bubbles

Reading · 1

A first bubble looks simple; its thin wall already holds a science story.

Reading · 2

A soap bubble is a thin water-and-soap film wrapped around air.

Reading · 3

Colors swirl from light in the thinning film (thin-film interference), not paint.

Reading · 4

Sketching moving color stripes turns a pretty swirl into evidence of thinning.

Reading · 5

Surface tension pulls the film; a free bubble settles into a sphere.

Reading · 6

Bubbles pop when the film breaks from touch, dust, drying, or thinning.

Math · all

45, 35, 84, 44, 75, 52.

Screen-free

Film around air; thin-film colors; surface tension; film breaks.

Outdoor or kitchen bubble play works. Keep mix away from eyes; wipe floors. Wonderers model looking and timing, not spraying faces. Humidity and recipe change how long bubbles last.

Speech and dictation are welcome. Keep the focus on film, light, and careful looking.

Four looks at a bubble

Soap Bubbles

Quiz 1. What is a soap bubble mostly made of?

A soap bubble is a thin watery soap film wrapped around a pocket of air.

Quiz 2. Why can colors swirl on a bubble?

Light reflecting in the thin film can make shifting color stripes as thickness changes.

Quiz 3. Why are free-floating bubbles often round?

Surface tension pulls evenly, and a sphere uses the least film for the air inside.

Quiz 4. What is one honest reason a bubble pops?

When the film breaks from thinning, drying, dust, or a touch, the bubble pops.

Outdoor or kitchen bubble play works. Keep mix away from eyes; wipe floors. Wonderers model looking and timing, not spraying faces. Humidity and recipe change how long bubbles last.
