# Fingerprints

## A mark on the glass

Morning light revealed a faint swirl on a glass. Under the magnifier, Little saw many curved lines instead of one plain smudge.

## Ridges and grooves

A fingertip has raised friction ridges and lower grooves. The ridge tops touched the glass and left separate curved lines.

## Make a little book

**1** Fold it into 8 boxes. Open it flat.

**2** Fold short end to short end. Cut the thick line. Open it.

**3** Fold the long way, pictures out. Push the ends in.

**4** Fold into a book. Page 1 goes on the front!

## Same map, new mark

A lighter press looked smudged, but its turns, endings, and splits still lined up. Pressure changed the mark, not the ridge map.

## Three broad flows

Loops curve back, whorls circle a center, and arches rise across. These families describe the broad flow, not every tiny detail.

## A print on paper

Washable ink coated the raised ridge tops. They made dark paths on paper while the lower grooves left pale spaces.

## Inside the loop

Two prints were both loops, yet their small details differed. Ridges ended and split in different places across each map.
