

A pretend job list to count

From marks to a morning. · Curiosity day

Name _____

Date _____

PRETEND NOTEBOOK · HEIGHT ABOVE SOIL

Day	1	2	3
Height	12 cm	19 cm	31 cm

Use the pretend notebook numbers. The picture is not a ruler.

An imagined window. The picture is enlarged to help us see.

- Job counts grow across three pretend mornings: 12, then 19, then 31. Find the change from morning 1 to 2 and from morning 2 to 3. Which change is greater, and by how much?

$$19 - 12 = \underline{\quad}; 31 - 19 = \underline{\quad}; \underline{\quad} - \underline{\quad} = \underline{\quad}$$

Show your thinking.

- One sequence uses 14 picture jobs and 9 word jobs. After that, 6 check jobs still wait. How many jobs are done before the checks? How many jobs in all?

$$14 + 9 = \underline{\quad}; \underline{\quad} + 6 = \underline{\quad}$$

Show your thinking.

- Someone says the total change from morning 1 to morning 3 is 18. Use the table to decide whether the claim is true and correct it.

$$31 - 12 = \underline{\quad}$$

Show your thinking.

Would every real lesson need exactly these job counts? No. These numbers are invented for our math story.
