Six math clues · answer key

Spider Webs

Math answers (pretend notebook numbers):

Math 1 · 64

6 + 8 = 14. Add 3 tens, 2 tens, and the new ten: 36 + 28 = 64.

Math 2 · 34

81 − 47 = 34. Regroup ones, then subtract tens.

Math 3 · 82

5 + 7 = 12. Add 4 tens, 3 tens, and the new ten: 45 + 37 = 82.

Math 4 · 44

70 − 26 = 44. Regroup, then subtract.

Math 5 · 77

8 + 9 = 17. Add 5 tens, 1 ten, and the new ten: 58 + 19 = 77.

Math 6 · 35

93 − 58 = 35. Regroup ones, then subtract tens.

Six two-digit add/subtract puzzles with regrouping. Numbers are pretend practice, not real dew counts.

Reading & writing · answer key

Spider Webs

Reading · 1

Overnight a web can be nearly invisible; cool air leaves dew beads that catch morning light so the pattern shows.

Reading · 2

On many orb webs the hub and radii are often dry and strong, while the capture spiral may hold glue beads. Spiders often walk the dry lines.

Reading · 3

Some spiders use woolly cribellate silk that snags without glue. Silk also carries vibrations so a spider can feel a tug through its legs. Dew is water from cool air, not spider glue.

Math

64, 34, 82, 44, 77, 35

Writing

Accept a drawing, dictation, or 1–3 sentences tied to a scene with because or maybe.

Look-don't-touch: watch webs from a step back. Outdoor dew walks are best on cool mornings. If anyone is afraid of spiders, keep the lesson on pictures and sketches. Hedge aloud with your child: many orb webs work this way, but spiders build other shapes too.

Offer dictation: let the child say a complete thought while you write it, then invite a picture or label.

Quiz answer key

Spider Webs

Quiz 1. Which orb-web parts are often dry?

The hub and radii are often dry and strong; the spiral may hold glue.

Quiz 2. How can silk catch without glue?

Woolly cribellate silk can snag legs and wings without glue droplets.

Quiz 3. How does a spider feel a tiny tug?

Silk carries vibrations; legs on the radii can feel a tug that may mean prey.

Quiz 4. What is morning dew on a web?

Dew is water from cool air. It catches light so the web pattern shows.

Look-don't-touch: watch webs from a step back. Outdoor dew walks are best on cool mornings. If anyone is afraid of spiders, keep the lesson on pictures and sketches. Hedge aloud with your child: many orb webs work this way, but spiders build other shapes too.
