

The quiet work of growing

A bean becomes. · Curiosity day

Name _____

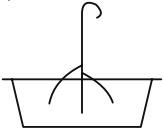

Date _____

stored food + first root

Little Wonderer looks at the bean. "Is anything in there?" A tiny plant is tucked inside. Stored food will help it begin.

shoot up / root down

With water, air, and enough warmth, the bean starts to grow. A root comes out first. It responds to gravity and grows down. A shoot grows up.

light + air + water

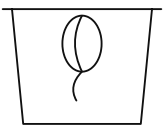

Leaves open in the light. They use light, water, and carbon dioxide from the air to make food. The little plant can make more of what it needs.

same soil baseline

"It looks the same," says Little Wonderer. Big Wonderer opens their notebook. An earlier mark is lower than today's tip. Their notes help them see a change.

stored food + first root

"Did the bean need leaves to begin?" they wonder. Look inside it again. The tiny plant had stored food before it had open leaves.

same soil baseline

They sit together by the window. Growing takes time. "What might change next?" asks Big Wonderer. Little Wonderer has a new question to draw.

Think about it: What helped the bean begin before its leaves opened? How did their notes help them notice growth?
