

WONDER DAILY

A zipper clicks together.

Make a little book

1 Fold it into 8 boxes. Open it flat.

2 Fold short end to short end. Cut the thick line. Open it.

3 Fold the long way, pictures out. Push the ends in.

4 Fold into a book. Page 1 goes on the front!

Bump meets pocket

Each zipper element had a bump and a pocket. Left and right elements alternated, nesting across the middle to hold together.

A moving boundary

Below the slider, two tooth rows stood apart. Above it, they made one joined row. Little wondered what happened inside.

Click at the stop

The last elements nested. The slider clicked against the top stop, which kept it from running off the closed row.

A hidden Y path

Inside the slider, two channels curved around a center wedge and met. Angled walls guided both tooth rows inward.

The wedge separates

Moving back sent the joined row toward the center wedge. It guided one side left and the other right, opening the zipper.

One after another

The channel lined up left and right elements. Bump met pocket, then the next pair followed. A flexible zipper chain formed behind the slider.
